Thu, 06 Dec 2018 14:43:00 GMT Introduction - Advanced R. - In computer science, conditional statements, conditional expressions and conditional constructs are features of a programming language, which perform different computations or actions depending on whether a programmer-specified boolean condition evaluates to true or false. Apart from the case of branch predication, this is always achieved by selectively altering the control flow based on some ... Fri, 07 Dec 2018 16:50:00 GMT Conditional (computer programming) - Wikipedia - Concurrent computing is a form of computing in which several computations are executed during overlapping time periods "concurrently" instead of sequentially (one completing before the next starts). This is a property of a system "this may be an individual program, a computer, or a network" and there is a separate execution point or "thread of control" for each computation ("process").
